Literature Review (6 marks)	Identifies challenge area. Some appropriate literature described.	Identifies challenge area. A sound discussion of several pieces of related literature, and some discussion of gaps.	Identifies challenge area. A good discussion of several pieces of related literature. A good articulation of current gaps.	1. The challenge area has been selected (Smart Home Automation System) with good justifications. 2. General and specific features of smart home system considering potential user types (senior citizens, childrens) and other parameters (pets, temperature, privacy/safety) have been presented. 3. Cannot clearly find the research gaps based on the existing work of the smart home system. You should add a new section to explain about it before the Conclusion section, so that the reader can really understand the motivation behind the development of interactive smart home automation system.	4
Interview Protocol (6 marks)	A suitable format, with questions that relate to the topic area.	A good format, which references ethics, identifies target participants, with questions that explore identified research gaps.	A good format, which justifies target participants, with insightful questions that are clearly linked to identified research gaps.	1. In general, you have provided a good interview and survey protocols. 2. However, the list of questions to be asked to the potential interviewees are quite difficult to follow because there are so many branches of questions (especially the what-why questions). You should simplify the wordings and divide into small blocks of questions. 3. You need to clearly define the scale representation (1 to 10).	4

Clarity, Referencing and Presentation (3 marks)	Meets most of the presentation and referencing guidelines.	Meets all of the presentation and referencing guidelines.	Meets all of the presentation and referencing guidelines. Very well presented and easy to follow.	1. Add a paragraph explaining the introduction to the literature review/ interview protocol before jumping to the subsections. 2. Need to add the numbered list for each subheading structure in the whole document. For example, 2.1.1 Ideal System Design. 3. The ACM Reference formats are mostly followed. 4. The last reference article (ICL) is not indexed/numbered. Therefore, I couldn't find the citation of this reference in the text.	1
